

Congratulations!!

You can now read & print PDF documents!

A Word about Printing from the Adobe Reader in WebCT:

Use the Adobe
Printer Button,
not the 'Print'
button in your
browser...

If your Adobe Reader does not have a printer button:

1. Make sure that you set the "focus" on the portion of the browser window that you want to print by clicking anywhere on that document.
2. You will see a faint black line around the browser window frame that has the "focus."
3. Select **'File'** and then **'Print Frame'**.
