The Archaeology program is an interdisciplinary program focused on the study of the human past through the material record. Courses focus on comparative world archaeology, field and analytic methods, laboratory techniques, and the archaeology of specific geographic regions. Current geographic areas of academic expertise are the Americas, Europe and the Mediterranean, and Southeast Asia. Degree options provide students with foundational training in the methodological, theoretical, and ethical aspects of contemporary archaeological practice.

Notes

- Students are strongly advised to plan course selection carefully in order to acquire needed prerequisites and to prepare for graduate school or careers in different specialties. Advising information is available on the Archaeology program website.
- Students are required to gain relevant archaeological field and/or laboratory experience. They are encouraged to take one of two existing field courses, ANTH 3000Y or ANTH-AHCL 3850Y, which are normally offered in the summer. Those who are unable to take one of these courses may substitute ANTH 3151H and 3152H, which are normally offered during the regular school year. Alternatively, students may register in a field school or lab methods course at another university by obtaining a Letter of Permission from the Office of the Registrar prior to registering in the course. See Letters of Permission ([p. 295](#)) for additional details.
- Students who already have extensive field and/or laboratory experience (such as from previous archaeological employment) should consult with the program coordinator, who may consider waiving the degree requirement for a field or lab course. At a minimum, students would normally have to have the equivalent of four weeks of full-time work in the field and/or lab (i.e., 160 hours total). If such a waiver is approved, the student will need to substitute an additional course, with the coordinator's approval, in order to meet the total number of required courses.
- Courses fulfilling University science course requirements for the BSc are marked "Sc" in the individual course descriptions.
- Students with an interest in Geographical Information Systems (GIS) are recommended to incorporate the Option in Geographical Information Systems, a joint program with Fleming College, into their program (see [p. 393](#)).
